

Type 3361 can be combined with...

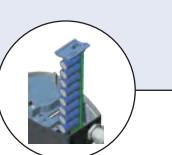

Type 3360

Rugged display
With operating
buttons

Electromotive 2 way globe control valve

- high precise and fast flow control
- several Kvs value per port size due to removable trim kit
- weather, impact and vibration resistant design
- easy cleaning by its design according hygienic demands
- position controller und process controller available

SAFEPOS
Energy-pack

Fieldbus

The innovative process controller Burkert valve Type 3361 is the solution when it comes to demanding control tasks and operating conditions. The electromotive actuator with ball screw positions the control cone with highest precision. A unique feature is its high positioning speed of 6 mm/s, that reacts quasi delay-free to process signals, and can be varied according to customer demands. Pressure variations or shocks in the medium aren't transferred to the valve position. Each flow optimized valve housing can be equipped with up to 5 different valve seats for a precise adaptation according to customer needs. If necessary, the safety position can be approached by an optional energy storage in case of power failure. Actuator and valve are adapted perfectly to each other with closed design and robust surface. This ensures the hygienic requirements of a fast and residue-free cleaning. Harsh environment are no problem for the Type 3361 because of the protection class IP65 / IP67 and its high impact and vibration resistance. Unrivalled cycle life and sealing integrity is guaranteed by the proven self adjusting spindle packing with exchangeable V-seals. The fieldbus suitable Type 3361 provides many helpful functions for process monitoring, valve diagnostics and predictive maintenance and thus offers the decisive advantage of a modern process automation.

Technical data

K_{vs} values	0.1 ... 37 m ³ /h
Port and seat size	DN10...DN50 / 3...50
Operating pressure	16 bar / 1600 kPa / 232 psi
Port connections	DIN EN 1092-1, ANSI B 16.5, JIS 10K G, RC, NPT (EN ISO 228-1, ISO 7/1 /DIN EN 10226-2, ASME B 1.20.1) EN ISO 1127 / ISO 4200, DIN 11850 R2, ASME BPE, BS 4825-1, SMS 3008 ISO 2852, DIN 32676, ASME BPE, BS 4825
Medium	Neutral Gas, water, alcohol, oil, fuels, hydraulic mediums, salt solution, alkali solutions, organic solvents, steam
Viscosity	max. 600 mm ² /s
Medium temperature	-10...+185 °C (seat seal metallic or PEEK) -10...+130 °C (seat seal PTFE)
Ambient temperature	-25...+65 °C (without touch display) -25...+60 °C (with touch display) -25...+55 °C (with SAFEPOS energy storage) Note: Derating see temperature chart
Seat leakage according to DIN EN 60534-4:2006	Shut-off class III and IV for metallic seat seal Shut-off class VI for PTFE and PEEK
Safety position at power failure	with SAFEPOS energy-pack: opened, closed or free programmable without SAFEPOS energy-pack: blocked in last position
Power supply	24 V DC ± 10% (max. residual ripple 10%)
Closing time (100% stroke)	3.3 ... 4.5 sec. (depending on stroke)
Travel speed	6 mm/s
Deadband (min.)	0.1 %
Duty cycle	100 %
Protection class	IP65 / IP67
Controller type	Position controller or process controller
Analogue control	Setpoint: 0/4 - 20 mA, 0 - 5/10 V and binary input (further inputs and outputs optional)

Technical data, continued

Fieldbus interface	büS (Bürkert-System-Bus) (Standard) CANopen, EtherNet/IP, Modbus/TCP, PROFINET (optional)
Vibration, sinusoidal	5 g according to IEC 60068-2-6 Test Fc
Shock, mechanical	50 g according to IEC 60068-2-27 Test Ea
Approval and Conformity	EGV 1935/2004 (standard) FDA (optional) ATEX / IECEx (optional) cULus Cert. No. 238179 (optional)
Ignition protection	II 3G Ex ec IIC T4 Gc II 3D Ex tc IIIC T135 °C Dc

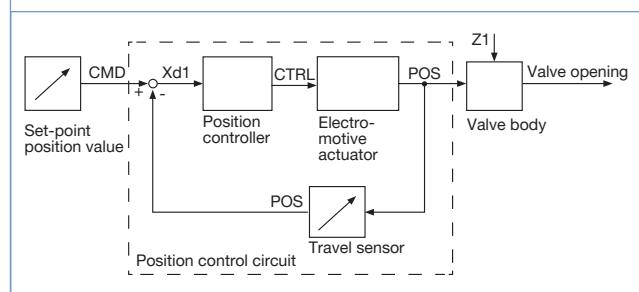

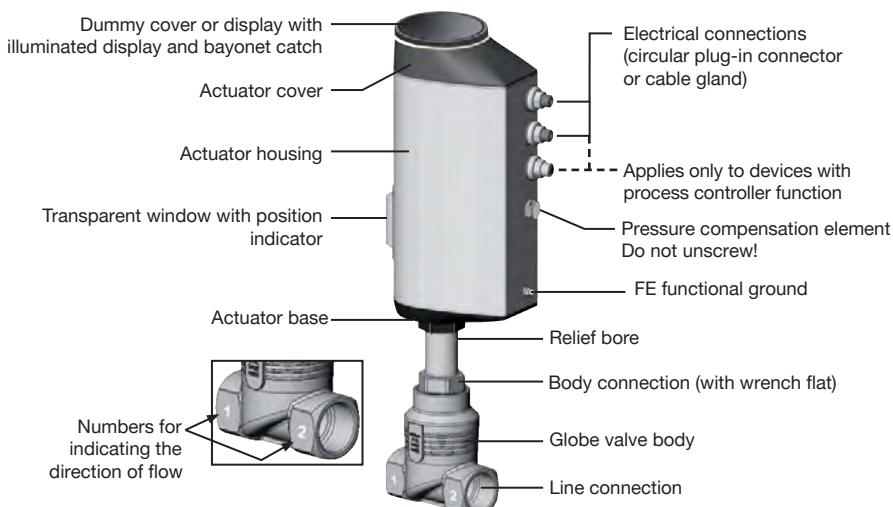

Structure and function

The electromotive linear actuator consists of a brushless direct current motor, gears and a threaded spindle. The valve spindle, which is connected to the threaded spindle, transfers the force to the control cone. The electronic control system is actuated either via standard signals (analog) or via a field bus (digital). Optionally there is the energy pack (SAFEPOS energy-pack) for the device. If the supply voltage fails, the energy pack supplies the actuator with the required energy to move the valves into the required position which can be adjusted via a menu.

The valve position can be manually changed in 2 ways. Either over an electrical manual control or over mechanical manual control, if no supply voltage applied. The device can be set and operated either via 2 capacitive buttons and 4 DIP switches or optionally on a display with touch-screen. There is also the option of setting the device via the bus Service interface and by using the PC software "Bürkert-Communicator".

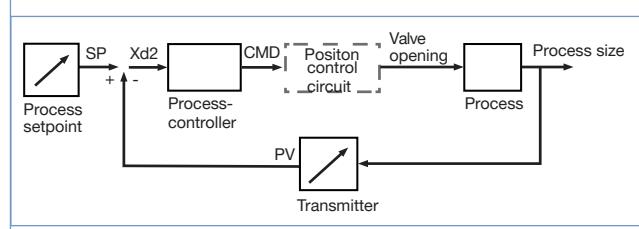

The intelligent process valve Type 3361 offers the operator options for process monitoring, valve diagnostics and predictive maintenance. Internal measurements for the operating state are evaluated and, if issued as a warning or error message. This signal, for example, undue environmental and process conditions, functional deviations of components or the state of the energy accumulator. Internal measurements for operating state are evaluated and, possible a warning or error message is issued. This signal indicates, for example, bad environmental and process conditions, functional deviations of components or the state of the energy accumulator. A special feature of the globe control valve is the screwed valve seat which can be replaced to reduce the nominal diameter.

Structure, electromotive globe seat control valve Type 3361

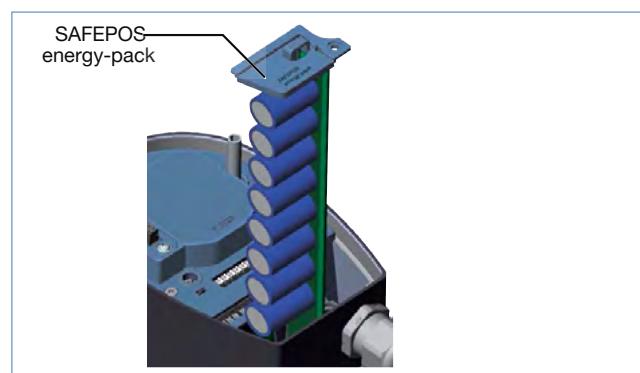

Integrated position controller

The position of the actuator (stroke) is regulated according to the set-point position value. The set-point position value is specified either by an external standard signal (analog) or via a field bus (digital). The travel sensor records the actual position (POS) of the electric linear actuator. The position controller compares this actual position value with the set-point position value (CMD) which is defined as standard signal. If there is a control difference ($Xd1$), the electromotive actuator is controlled via the CTRL variable and the actual position value is changed accordingly.

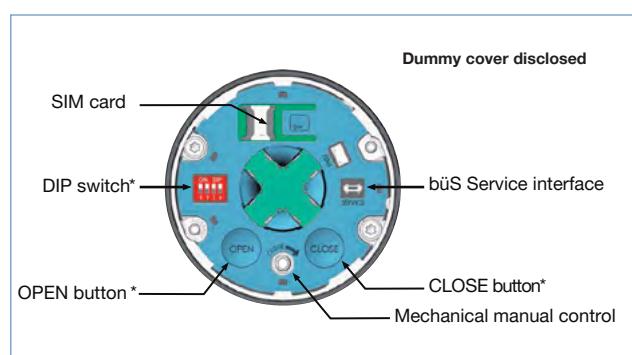

Integrated process controller

By implementing a PID controller can a process control be carried out. From the external signal (z.B. level, pressure, flow, temperature) the process setpoint and the actuals process value is calculated on the control parameters (PID controller) for the target position of the valve.

Structure and function, continued**Safety position with energy storage (Option)**

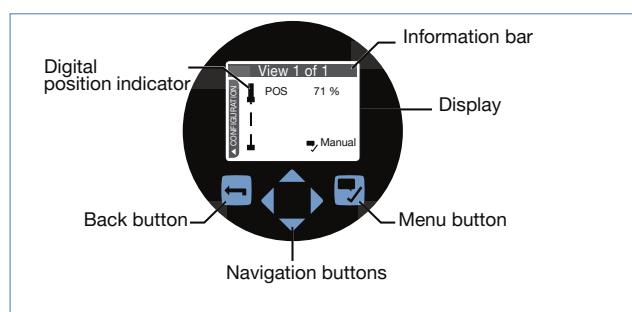

The safety starting positions in case of power interruption is realized with the optional energy storage SAFEPOS energy-pack. The desired position is adjusted from the menu. Here any intermediate position can be defined in addition to the end positions (NO / NC). The energy storage has a lifespan of up to 10 years, depending on the operating conditions. The power of the energy storage is monitored and a warning is displayed to indicate its life is coming to an end. The memory is designed as a plug-in module making it easy to exchange. Without energy storage, the valve remains in the last position. The energy storage is fully charged after maximum 100 sec.ds (depending on the operating conditions) and ready to use.

Controls and indicators

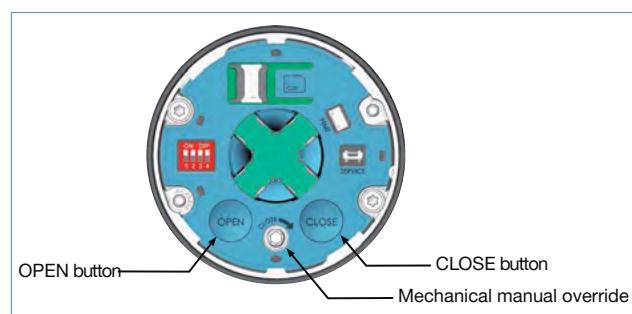

Devices without display module

In the version without control display the basic functions are operated by 4 DIP switches and 2 pushbuttons. These are located under the dummy cover which can be removed manual by turning. Through the büS service access, the device can also be configured in detail with the Burkert communicator software. For this, the optional USB-büs interface kit is required.

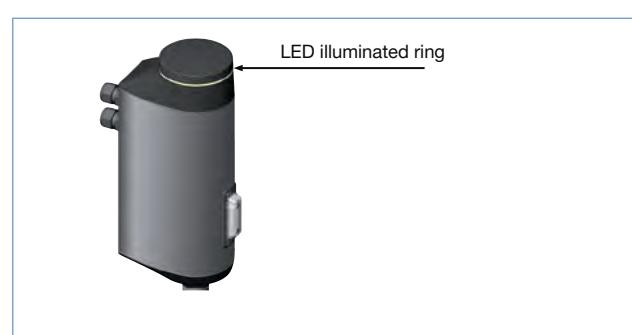

Robust display with control buttons (optional)

The robust display module is easy to use, it configures and displays all the required functions. In addition to the start screen you can also switch to the configuration view and user-specified views as needed. All functions of the device without display module like büS-Service interface are available too.

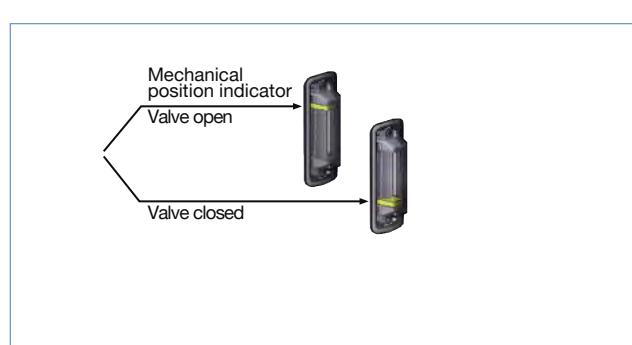

Manual and electrical operation

The manual override for mechanical operation of the valve is located under the dummy cover or the display module. Electrical manual override for the procedure is carried out directly on the touch screen, or in the version without a display by two buttons below the dummy cover.

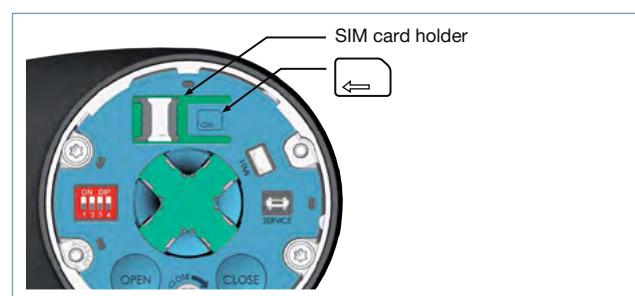

360°- LED Illuminated ring

To display the device status, the valve timing and the operating condition a visible 360° LED illuminated ring is mounted around the dummy cover or the display module. The LED ring lights up, flashes or flashes in one or different colors. Depending on customer requirements 4 different LED modes can be selected (Namur mode, valve mode without warnings, valve mode with warnings, LED off)

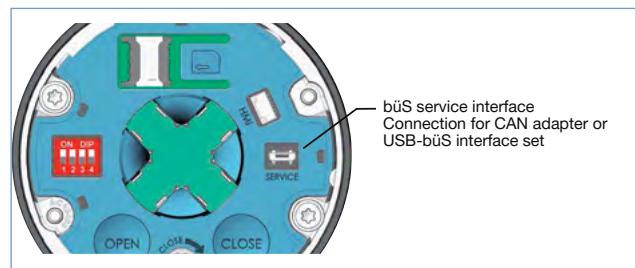

Mechanical position indicator

The mechanical position indicator also indicates when the supply voltage of the current valve position fails

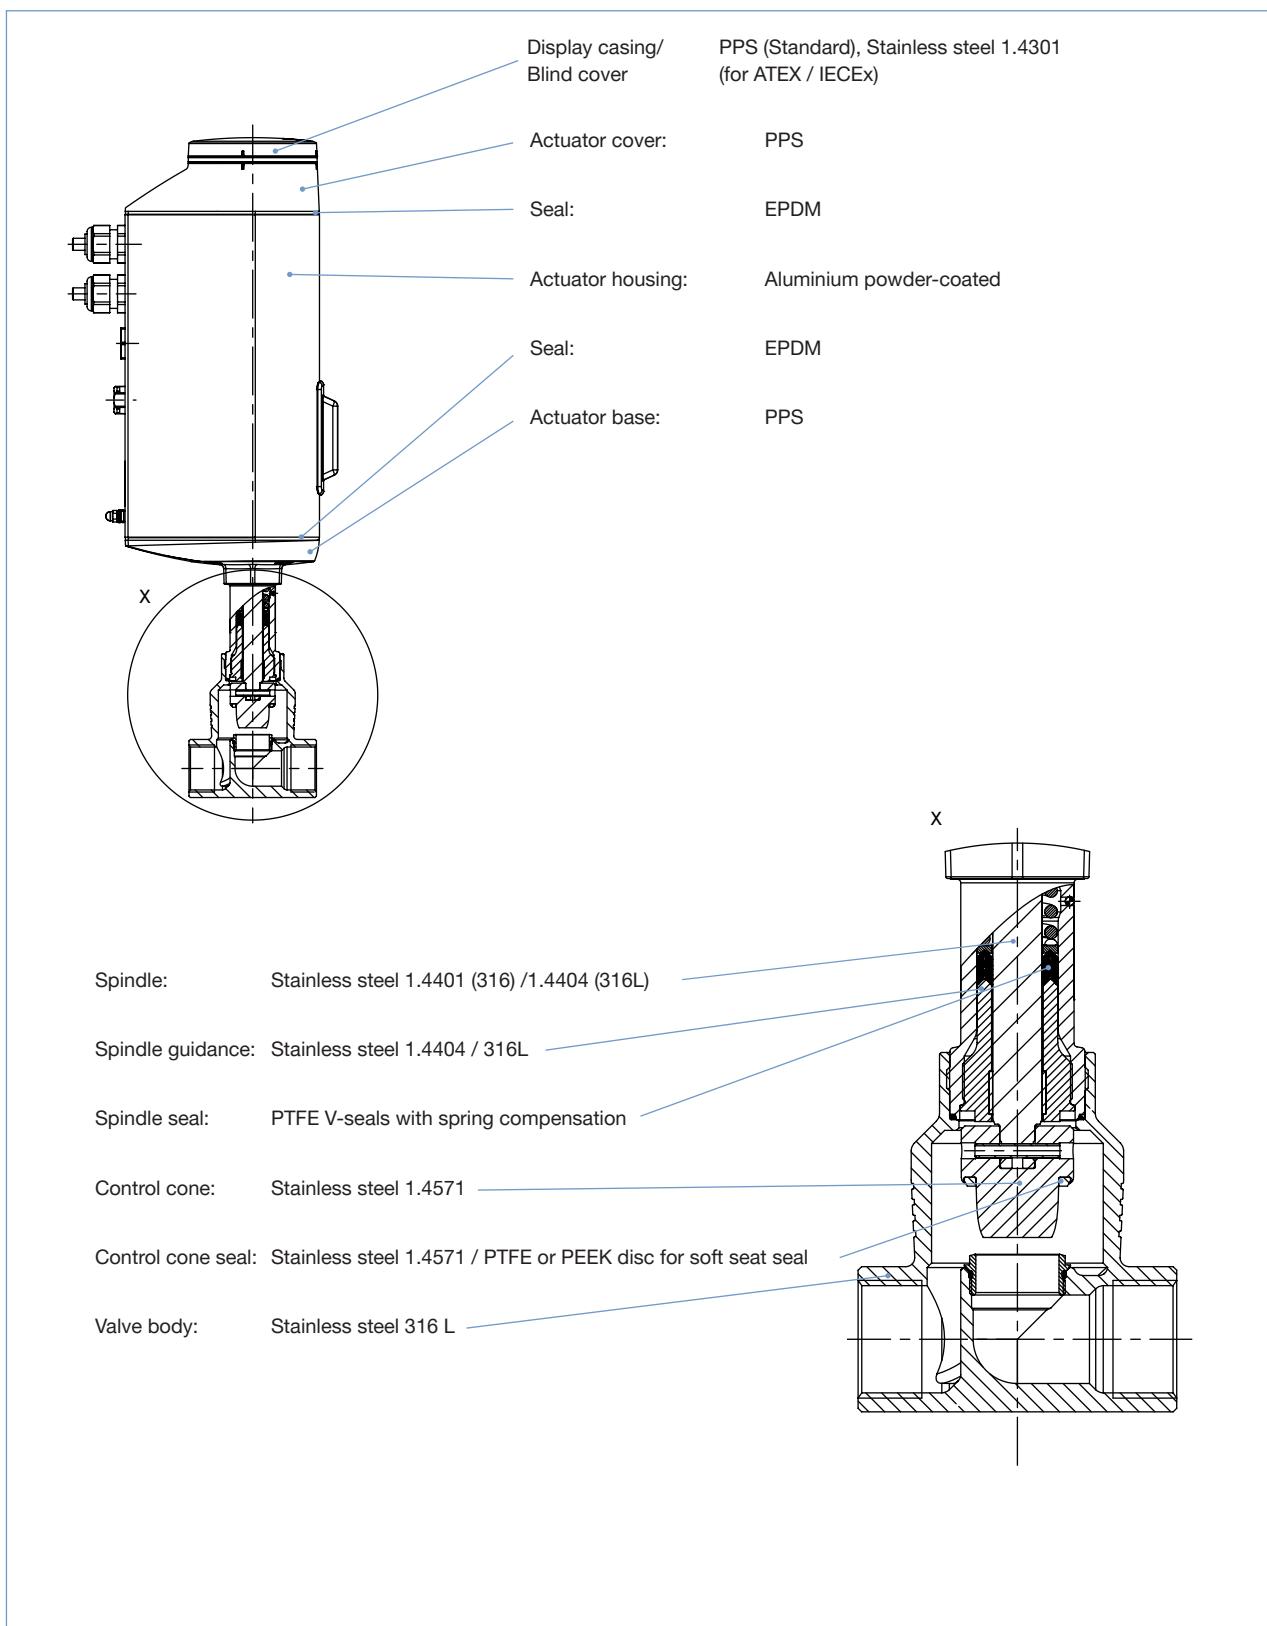

Controls and indicators, continued**SIM card as data storage (option)**

With the SIM card optional device-specific values and user settings can be saved and quickly transferred to another device.

**büS service interface**

The büS service interface connects the device to the communicator software on a PC, laptop or smartphone. From there, a configuration of the device or failure diagnosis can be performed.

Design and materials view

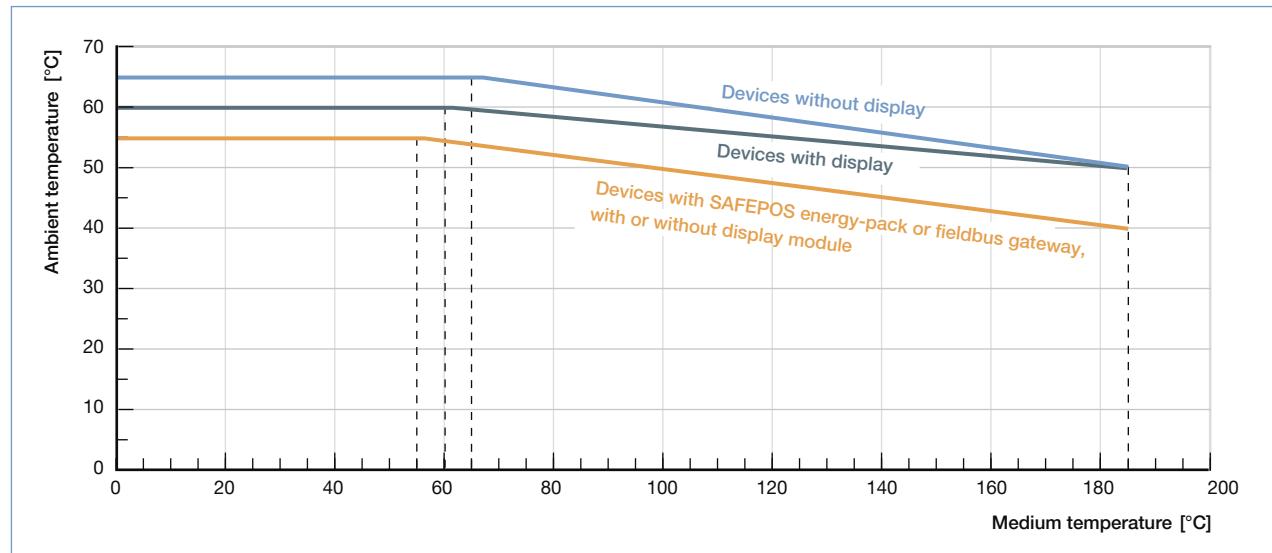

Note: The globe control valve **Type 3361** could be delivered with miscellaneous port connection (thread, welded and clamp), there are not be represented in the picture, but are made with same material as the valve body.

Technical data

Temperature chart

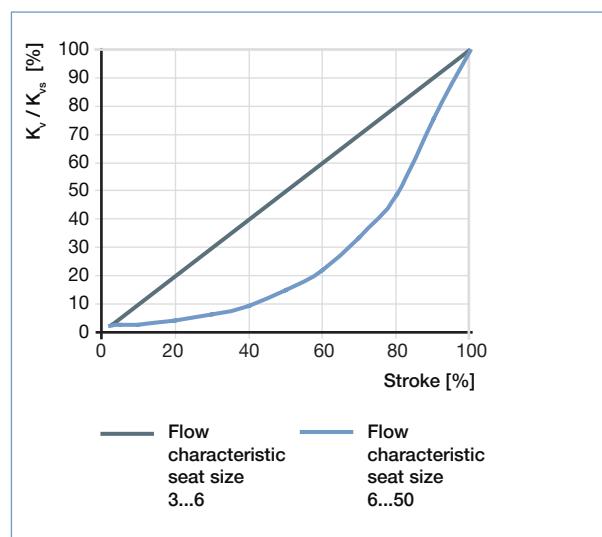

The maximum allowable ambient temperature and temperature of the medium influence each other. The maximum allowable temperature curves of different device variants can be seen in the temperature chart. The curves were determined for maximum operating conditions (max. operating pressure and motor power). For deviating operating conditions an individual verification can be performed. Please contact your Burkert office for more information.

Flow characteristic acc. to DIN EN 60534-2-4

- Theoretical rangeability: K_{vs}/K_{v0} (see table)
- K_{vr} value¹⁾ at 5 % of the stroke for seat size > 10 mm
- K_{vr} value at 10 % of the stroke for seat size ≤ 10 mm
- The globe control valve shows different characteristics depending on the orifice:

Seat size	Theoretical rangeability	Characteristic	Code	K_{vs} values [m^3/h]
3	10:1	Linear	NF41	0.1
4	25:1	Linear	NF43	0.35
4	10:1	Linear	-	0.5
6	25:1	Equal percentage	NF45	1.2
6	25:1	Linear	-	1.25
8...100	50:1	Equal percentage	-	-

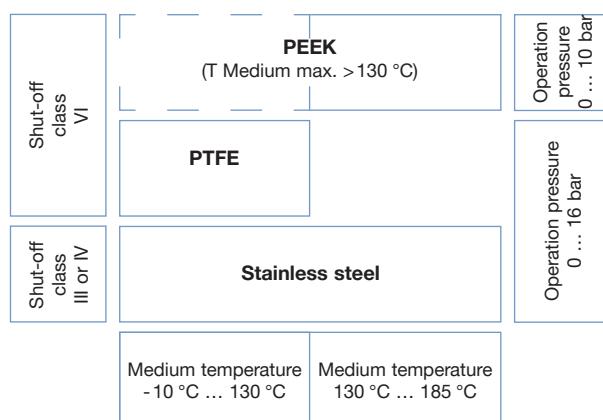

¹⁾ K_{vr} value= the smallest K_v value at which the angularity tolerance according to DIN EN 60534-2-4 can still be maintained.

Selection chart for seat seal

A metallic seat seal is recommended for shut-off class III and IV.

Seat seal with PTFE is used for shut-off class VI, if temperature of the medium is < 130 °C. If the maximum temperature of the medium exceeds 130 °C temporarily or permanently, then PEEK is used for seat seal.

1.) All values refer to a supply voltage of 24 V at 25 °C

Electrical control and interface

The position of the actuator is regulated according to the set-point position value. The set-point position value is specified either by an external standard signal (analog) or via a field bus (digital).

Analogue Control

For analogue control 2 variants are available for the inputs and outputs and the connection interface

Input and output:

- 1 analogue input, 1 binary input
- 1 analogue input, 1 binary input, 1 analogue output, 2 binary output (option)
- 1 input for process actual value (for process controller version)

Interface:

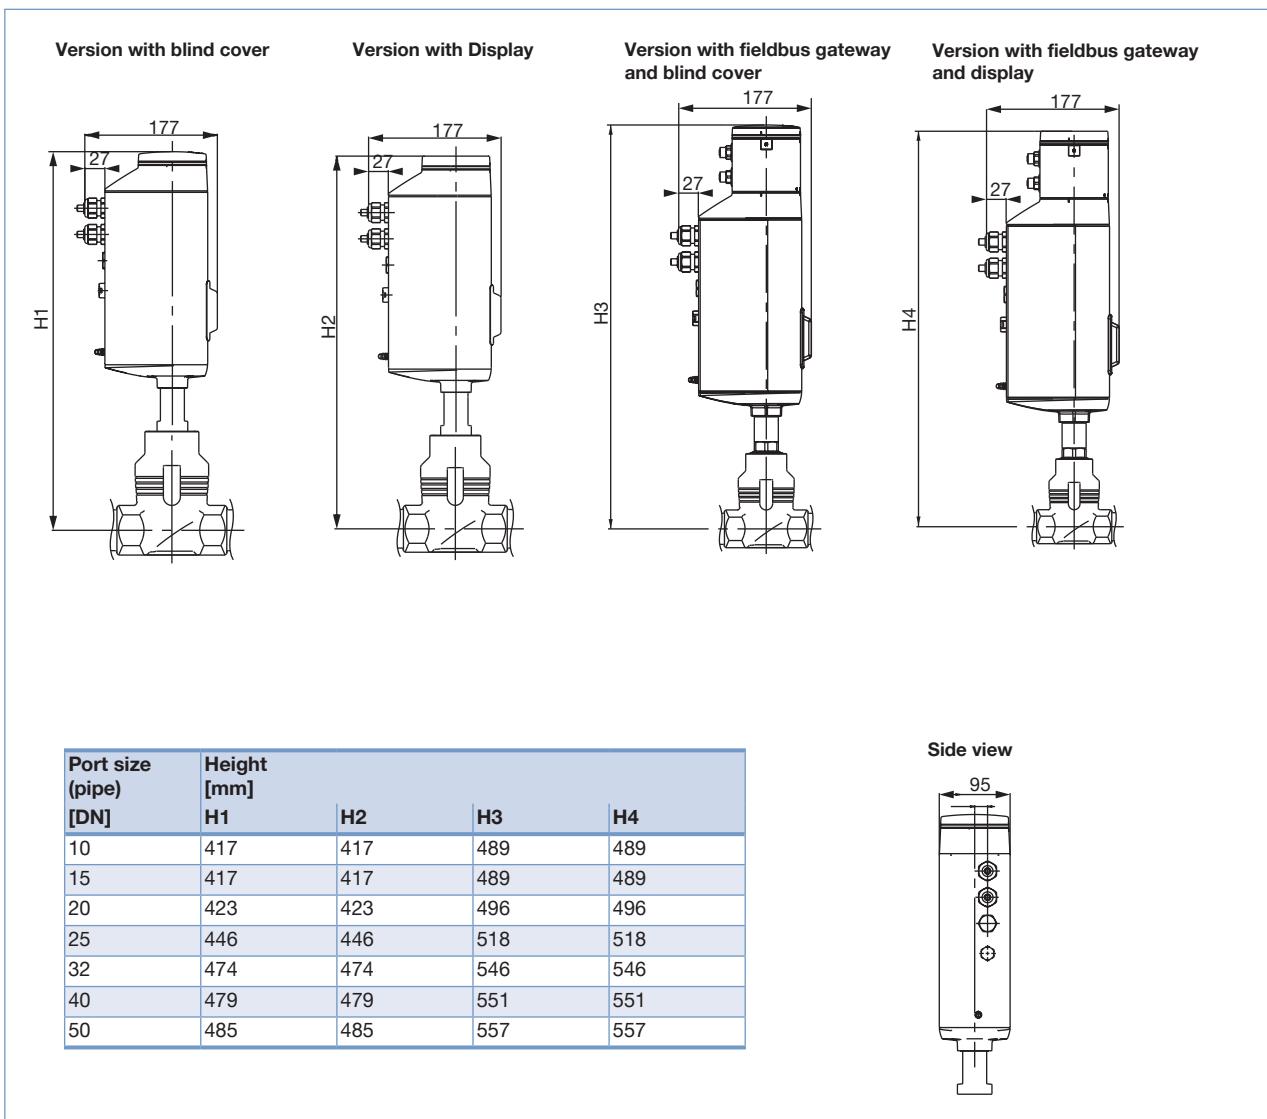

- Cable gland with connection terminal
- M12 circular connectors (option)

Fieldbus: EtherNet/IP, PROFINET, Modbus TCP (option)

The Fieldbus Gateway for EtherNet / IP, PROFINET and Modbus TCP is integrated into a special module. It has 2 fieldbus connections with 4 pin M12 circular connectors. Under the gateway housing cover are the interfaces for the fieldbus connection and status LEDs. If there is a need to be include it in a network then the configuration of the Ethernet can be performed via the web server.

Flow coefficient	K_{vs}	(m ³ /h)	C_{V100}	(GPM(US))
Seat seal	metallic	soft seal PTFE		soft seal PEEK
Connection	Flange	DIN EN 1092-1		ANSI B16.5
	Thread	G		NPT
	Weld	DIN EN ISO 1127 / ISO 4200		DIN 11850 2 / DIN 11866 A
	Clamp	ASME BPE		DIN 32676 A (tube ISO 4200)
	Other			

Valve data		
Safety position		With energy storage (factory setting NO) With energy storage (factory setting NC) Without energy storage (last valve position blocked)
Function		Positioner Process controller
Operation		With Touch-Display Without Touch-Display, internal button
Electrical connection		Cable gland M12 multi-pin plug connection
Communication		Analogue: Digital (Fieldbus):
		1 AI, 1 DI 1 AI, 1 DI, 1 AO, 2 DO EtherNet/IP PROFINET Modbus TCP CANopen
SIM card		With without
Approvals / Conformities		
EG regulation no. 1935/2004		
FDA		
ATEX II Cat. 3 G/D, IECEx		
cULus cert. no. 238179		
Additional Requirements / Comment
